INTERPRETATION METHOD : AI MULTIMODAL FUSION ANALYSIS		NEGATIVE	NEGATIVE	

LUNG REGION CLASSIFICATION (MedSAM AI Segmentation)		
Anatomical Region	Severity	Status
Upper Right Lobe	MEDIUM	Moderately Affected
Upper Left Lobe	LOW	Mildly Affected
Mid Right Lobe	HIGH	Critically Affected
Mid Left Lobe	LOW	Mildly Affected
Lower Lobes	MEDIUM	Moderately Affected

Interpretation(s)

The AI-based TB detection system uses a multimodal approach combining Deep Learning analysis of the Chest X-Ray image with clinical parameter scoring (cough duration, fever, weight loss, night sweats) to arrive at a fused probability score.

AI Recommendation: TB unlikely. Consider other respiratory conditions if symptoms persist.

DISCLAIMER: This report is generated by an AI system for clinical decision support only. It is not intended to replace professional medical diagnosis. A qualified physician should evaluate these results in the context of the patient's full clinical picture. Confirmatory tests (sputum culture, GeneXpert, TST) are recommended for definitive TB diagnosis.
